

Saving an ERwin Model into Visio or Word

By Rohit Boob

As far as I know, there is no direct option in CA ERwin Data Modeler to save data model diagram in Word or Visio. There are times that you would like to send a data model diagram to users who do not have ERwin. One option is to do print screen and paste the same into Word, but there are times when the data model diagram is too big and you have to take multiple print screens. Here's a tip/trick to address this issue, do **Ctrl+A** in CA ERwin Data Modeler or select the tables that you want to share and then do **Ctrl+V** in Word or Visio. It pastes the data model diagram as-is.
